Предисловие

Сборник типовых расчетов предназначен для студентов математических и технических специальностей, а также частично для специальностей с более глубоким изучением математики. Часть задач заимствована из книги Л.А. Кузнецова «Сборник заданий по высшей математике».

Цель этого пособия – выработать у студентов навыки в решении стандартных задач по курсу математического анализа.

В сборнике даны задачи по темам: Пределы, Производные, Графики, Интегралы. Наиболее полно тема Графики представлена в методическом пособии Ф.А. Галиевой «Построение кривых», в котором также разобраны подобные задачи. Для решения более сложных задач по теме Интегралы автор отсылает Вас к вышеуказанному сборнику задач Л.А.Кузнецова.

Выражаю большую благодарность Коробейниковой Наталье Ивановне за ценные указания при создании этого сборника.
