19th to 22nd May 2008
Interlaken, Switzerland

The International Chemical Weapons Demilitarisation Conference

Web-Service for Prediction of the Accidental After-Effects at the Chemical Weapon Facilities

Vladimir M. Kolodkin and Vladimir A. Leonov, Institute of Natural and Technogenic Disasters, Green Cross Russia

The web-service for prediction of the accidental after-effects at the chemical weapon facilities is being developed with the aim of preparation of the population for response in the conditions of emergencies and also to meet the needs of developers.

The web-service is intended for use by:

Administration departments of various levels.

Services responsible for the safety.

Educational institutions.

Information centers etc.

The creation of the systems on the basis of the web-technologies would provide the experts with an *extended access to the up-to-date means of prediction of the accidental after-effects and risks* and contribute to the safe destruction of chemical weapon.
